What you should know about PFAS

PFAS is the abbreviation for poly- and perfluoroalkyl substances. These substances are used in everyday objects as well as in industry due to their oil, dirt and water-repellent properties. However, some PFAS are thought to be harmful to health and take a long time to break down in the environment. That's why, when it comes to choosing your protective clothing, you should always make sure that it is free from PFAS or other substances that may be harmful to your health.

Less is more. When it comes to the use of additives in protective clothing, we stay true to this motto at EWM. The health of the people that use our welding technology has always been our top priority since day one. That's why we always put your protection at the centre of the development of our products - whether it's our welding machines, our accessories or our welder's clothing.

We are always looking for ways to make our welder's clothing even better for the environment. The welder's protective clothing in our Powershield collection is therefore already completely PFAS-free. But don't worry, it still offers all the benefits you've come to know and love: it's robust, long-lasting and extremely comfortable to wear.
