

Welding technology manufacturer at Metal Construction Congress

EWM AG in dialogue with the German metalworking industry

Exchanges, networking and new insights from practical applications – the Metallbaukongress has evolved into one of the most popular meeting places for the metalworking industry. Despite being booked out on commissions, over 300 experts took part in the event in Würzburg this year. EWM AG also attended this annual industry event and were the main sponsor. At their stand, experts from the welding technology manufacturer answered questions from interested visitors on all things related to welding.

The Metallbaukongress (metal construction congress) has evolved into a permanent fixture in the German metalworking calendar. “The event is so special because experts can discuss topics with their equals. There are also interesting speeches where participants can learn about new advances in the industry bringing valuable insights to everyday activities”, reports Robert Stöckl, Sales Director at EWM AG. He has been a regular at the event for many years and is a member of the jury for the Deutscher Metallbaupreis (German Prize for Metal Construction). The presentation of this prestigious industry award is one of the highlights of the two-day conference. This year, Robert Stöckl gave the presentation speech for the winner in the “Steel Construction” category. Huhle Stahl- und Metallbau GmbH planned, constructed, produced and built a separate tower for a large forklift truck manufacturer at Frankfurt Airport. “I’m always impressed by the level of invention and skill that the companies nominated for the award use and master during their project”, explains Robert Stöckl. “We are also pleased that EWM welding technology is used in many of the projects.”

Advice on all things welding

As the main sponsor, EWM supports the Metallbaukongress, held in Würzburg this year, both financially and with their welding expertise. At their stand, the family-run company explained the recent developments in arc welding and presented a high-quality complete solution with unlimited possibilities for use.

EWM experts also used the opportunity to directly engage with German metalworkers and present application-orientated solutions to fulfil industry requirements. In his speech, Stanislav Wiens, Deputy Chairman of Digital Welding Solutions at EWM, outlined opportunities for the qualification of welding processes for businesses already certified according to EN 1090 or being in the process of obtaining certification. He also explained the advantages of digital administration for welding documentation. His comments regarding modified MIG/MAG welding processes were particularly interesting for metalworkers as they offer significant improvements in the areas of efficiency and quality in welding.

In his presentation speech, Robert Stöckl, Sales Director of EWM AG, praised this year's winner of the Metallbaukongress in the "Steel Construction" category.

About EWM:

EWM AG is Germany's largest and one of the most important worldwide manufacturers of arc welding technology. The family-run company from Mündersbach has been living their motto, "We are welding", for over 60 years with forward-looking, well thought-out and sustainable complete solutions designed with a large helping of passion for industrial clients, as well as skilled craft businesses.

EWM develops high-end welding technology. The company, based in Germany's Westerwald region, offers complete systems that cover everything from high-quality welding machines (and all associated components), through welding torches, to welding consumables and accessories for manual and automated applications. EWM has made a name for itself worldwide thanks to its plants in Germany, China and the Czech Republic.

Users praise the products' ease of operation and excellent results. Companies value the solid consultancy, service and enormous savings that come with EWM systems. The welding processes, some of which are patented, reduce the consumption of materials, energy and time during operation, and produce up to 75 percent fewer welding fume emissions.

The innovative welding manufacturer currently employs around 700 employees at 14 German and 7 international locations, with just under 400 of these being based at their original headquarters in Mündersbach.
