

EWM supports DVS-IIW Young Professionals

Helping young welding engineers to visit a global conference

To support young academics and thereby push forward the development of welding technology, in 2018 EWM AG was again one of the sponsors of the “DVS-IIW Young Professional” at the 71st IIW Annual Assembly & International Conference. This year the world congress for welding specialists took place in Indonesia. For the 28th time, “IIW Young Professionals” from all across the world took the opportunity to present the results of their research to an international audience during the different technical panels of the International Institute of Welding (IIW).

Every year, experts from across the globe meet at the conference hosted by the International Institute of Welding (IIW) to discuss joining, separating and coating technology. Top-class speakers and a total of 23 working groups attend the event. For young scientists, visiting the conference is a great career opportunity.

In Germany, the DVS – *German Association for Welding and Associated Processes* – has made it its business to promote young professionals, enlisting EWM for support. In 2018, 26 “DVS-IIW Young Professionals”, aspiring engineers and scientists from Germany, gave presentations to the international specialist audience in Bali. In addition to this, the five women and 21 men forged new contacts and gained insight into new developments and solutions in joining technology.

For years, EWM has been an important supporter of the DVS-IIW Young Professionals. This is one way in which Germany's largest manufacturer of arc-welding technology supports international research and development. But as a global technology driver EWM does even more: International groups of young welding engineers and scientists from the IIW often come together in EWM's highly modern development division in Mündersbach to consider new processes and solutions in arc-welding technology.

At the 71st IIW Annual Assembly & International Conference in Bali, 26 aspiring engineers and young scientists from Germany presented the results of their research to an international specialist audience with the support of EWM.

About EWM:

EWM AG is Germany's largest and one of the most important worldwide manufacturers of arc welding technology. The family-run company from Mündersbach has been living its motto "We are welding" for over 60 years with forward-looking and sustainable complete solutions, designed with a large helping of passion for industrial clients, as well as skilled craft businesses.

EWM develops high-end welding technology. The Westerwald-based company offers complete systems that cover everything from high-quality welding machines (and all associated components), through welding torches, to welding consumables and accessories for manual and automated applications. EWM has made a name for itself worldwide thanks to its plants in Germany, China and the Czech Republic. Users praise the products' ease-of-operation and excellent results. Companies value the solid consultancy, service and enormous savings that come with EWM systems. The partially patented welding processes reduce the consumption of materials, energy and time, and produce up to 75 percent fewer welding emissions.

The innovative welding manufacturer employs around 700 employees at 14 German and 7 international locations, and just under 400 of these are based at their original headquarters in Mündersbach.
